Hi Ray,

I meet Paul and his son on site last week. We have spoken about the equipment, material handling and staging area. He is setting up today and stated they will be working tomorrow (4/8/15). The main project work will start next week on site. Let me know when you are going to be on site so we can give you an update. My cell number is 774-836-7999.

See you soon,
Dale

Dale,

good news on the Determination of Applicability. kudos for steering this thru the process.

we should do whatever is possible to mitigate noise, even if this were only to mean that work should begin and end at appropriate times each day.

i just got back from a week of vacation and was as surprised as you are to hear only yesterday that Paul Chouinard, CEI's construction subcontractor, would be beginning work today. i just forwarded your email to Nick Christofori at CEI and hope to better understand their initiative. it is possible Paul is mobilizing equipment so that work might occur as soon as he has had a chance to touch base with you / everyone. indeed, as was his *modus operandi* for our most recent Providence BMP project, he is usually somewhat anxious to get equipment in place and materials scheduled so that he can feel comfortable moving forward.

in the meanwhile, assuming the photo is one of your own, i would ask you kindly to go ahead and introduce yourself to Paul and see that he has everything that he needs from you, including contact info for you, Roger, DPW; that he is aware of the noise questions; perhaps introduce him to museum personnel?; etc.

because it was my understanding of the latest schedule that construction would not start until about the 13th, i am currently planning to be on-site next week so that i too may understand the 'lay of the land', if you will, and can therefore be of some assistance as needs may arise.

btw, i have your comments on the MOU and will get back to you on this. thanks.

my cell phone # is 617.650.1345. pls do not hesitate to call me at any time if you feel the need.

Hi Ray,

Attached is the WPA Form 2- Determination of Applicability for the Gateway Marina Stormwater Project in Hyannis. We received a "Negative Determination" with no questions from the Conservation Commission only praise for the project. We did have two private citizens with a host of questions just before the start of the meeting. A few of the questions were about noise. Not just the noise during the construction but more important about noise from the water going over the rock way. They seemed happy with the answers.

Also attached is the web shot of your contractor on site today (4/7/15) starting work. When is the "pre-construction" meeting?
